concerto.ai

Frontend Assignment

- Implement the FAQ Review page as given in the design "FAQ-review.png"
- Use "FAQ-data.json" to populate the page with data.
- The Question and answer fields should be editable by default.
- If any question or answer is modified by a user, an "edited" flag should appear for that section as in "FAQ-review-edited.png".
- If the changes are undone, the "edited" flag should disappear.
  - Example: If we add a character(s) and then delete it using backspace. The expected functionality is that "edited" button should disappear.
- Reset the page with original data on pressing cancel.
- Post the modified content to "http://httpbin.org/post" on clicking "Approve & Submit".
- On successful post, display a success message and clear page contents.
- If user tries to refresh or close the page before submit, they should get a warning that they would lose unsaved work.
- Build only client side content.
- Upload the work to a google directory and share a link to the folder.
